

THE PRESIDENT OF THE PROVINCE OF LODI SANTANTONIO VISITING ITELYUM

On Monday 24 October, the President of the Province of Lodi, Fabrizio Santantonio, visited the Itelyum headquarters in Pieve Fissiraga (LO), meeting with CEO Marco Codognola

Pieve Fissiraga (LO) 24 October 2022 - A visit to Itelyum Regeneration in Pieve Fissiraga for the President of the Province of Lodi, Fabrizio Santantonio, to get a closer look at the entrepreneurial reality behind the regeneration process of used lubricating oils that has led Italy to first place in Europe for the quality and technology used.

Innovation and sustainability, strategic drivers for the companies most focused on the National Recovery and Resilience Plan, were the focus of the visit: these are the factors that characterise the Itelyum model that competes internationally, in terms of performance achieved and contribution to the circular economy.

"During today's visit," *said the President of the Province of Lodi, Fabrizio Santantonio*, "I was able to deepen my knowledge of an industrial reality that is particularly significant for our area, which stands out both for its technological content, marked by innovation and the development of cutting-edge solutions, and for its relevance also in terms of employment. It is a presence that the Province looks at with great attention, also with reference to the most delicate profiles of its relations with the local reality, in the constant search for an adequate balance between the operational needs of a production activity of great general importance in the context of waste recovery and valorisation policies, and those of a territorial insertion that preserves sustainability and moderation of impact'.

"The Itelyum Group," *said Marco Codognola, CEO and General Manager of Itelyum*, "is a consolidated European reality, but it keeps its 'heart and brain' in Lombardy, so we are proud to have received today the visit of President Santantonio, to whom we illustrated the technology of the plant that produces quality regenerated products, offering the sector a strategic factor of sustainability. Regeneration and material recovery in the economy, are the two fundamental assets for the realisation of the European green deal in which Itelyum participates through continuous investments in research and development, plants, professionalism and structures that make Italian industry more competitive and sustainable".
